

Guidelines for Research Thesis Writing BBMS

2017

ACADEMIC DEPARTMENT of MANAGEMENT AND SCIENCE INSTITUTE

Guidelines for Research Proposal Writing – Bachelor in Biomedical Science

The objective of the research component is to develop knowledge and skills of the undergraduate to plan and conduct a research project using scientific methods, analyze data using basic statistical methods, derive appropriate conclusions and recommendations and to present the findings in a scientific report within the time frame available.

The following guidelines are issued with regard to formulating the research proposal:

A. General

In this course final year students are required to carry research project under the supervision of a lecturer. A written report has to be prepared and presented in a seminar to be evaluated by panel members. The trainee should personally be involved with data collection.

B. Course Learning Outcome

Knowledge	Describe orally and written form the fundamental concepts of handling research
	Explain in details the proper way to search for scientific references
	Explain in details the proper procedure to produce scientific report
Skill	Conduct individually suitable research methodology related to the topic given
	Conduct individually the specimen and instrumentation needed for the research
	Explain in written the nature and conclusion of the project with the references to the original objective and hypothesis
	Write a scientific report based on the format given
Attitude	Present orally or in written research findings

C. Project Assessment

- Student project is assessed through:
- Class / workshop attendance /peer evaluation 20 %
- Report* 50 %
 - Literature Review 5%
 - Materials and Methods 5%
 - Data Collection and Analysis 10%
 - Results 10%
 - Discussion and conclusion 10%
 - References 5%
 - Overall 5%
- Thesis defense oral presentation / VIVA 30 %
- Total: 100 %

D. Thesis writing

The thesis should be written in the past tense (passive voice preferably). Below are the guidelines that student should follow in writing the thesis. This is to affirm the assurance of standardization in project presentation and grading. Course evaluation does not depend on the writing alone.

The theses report should consists of:

- Title page
- Declaration
- Acknowledgment
- Table of contents
- List of tables, figures and plates
- Abstract
- Introduction
- Materials and Methods
- Results
- Discussion
- Conclusion and Recommendation
- References / Bibliography
- Appendix

1. TITLE PAGE

Title should be short and accurate and reflect on the main theme of the research carried out. Title should be prior approved by the supervisors.

Title page should contain the followings (Refer the specimen pages at 19, 20, and 21):

- I. The project title must in capital letters (the title must be as simplified as possible and gives the idea of the project).
- II. Name of student and matrix number.

2. DECLARATION

This section consist of student's declaration on all work produced and also the Supervisor's certification on the student's work produced in conjunction with the degree requirements.

3. ACKNOWLEDGEMENT

The objective of this section is to appreciate individuals, institutions or government bodies that have helped, supported and guided the project.

4. TABLE OF CONTENTS

The title, chapter and sub main section must be listed in the table of contents. The title must be mentioned as exactly as in the project text.

5. LIST OF TABLES, FIGURES AND PLATES

The title of all listings of tables, figures and plates in the text must be precise. All tables, figures and plates must be numbered accordingly.

6. ABSTRACT

This section must be simplified (between 200 – 250 words). The abstract simplifies the overall project. It should consists of:

- I. The main objective and scope of project / research.
- II. The methodology used.
- III. The research problem and/or main objective of the research (this usually comes first).
- IV. The simplified results.
- V. The main conclusions.

7. MAIN TEXT / BODY

The main text of the project is arranged according to chapters or section numbered. The writing arrangement depends on the course field and the students are responsible to prepare the project systematically. Generally, the content and main text will consist of the following sections:

CHAPTER 1: Should consists of three main components:

- **BACKGROUND INFORMATION:** may include subheadings under this as per relevance to the description of the research problems. All relevant literature to be included under this section. Minimum 10 pages is required in this section.
- **JUSTIFICATION**
- **OBJECTIVES:** General objective and Specific objectives

CHAPTER 2: MATERIALS AND METHODS

Elaborate all facilities and equipment utilized. Explain how data was collected/generated, explanation of how data was analyzed explanation of methodological problems and their solutions or effects. Write in past passive voice third person. Should include details regarding the following in the given sequence:

- 2.1. Study type/design
- 2.2. Study setting
- 2.3. Study period
- 2.4. Study population/s with Inclusion / Exclusion criteria according to relevance
- 2.5. Calculation of sample size
- 2.6. Sampling technique
- 2.7. Intervention – describe briefly the proposed intervention (applicable only to an intervention study) and clear statement of outcomes

2.8. Study instruments

2.9. Questionnaire – type of the questionnaire and broad components to be briefly described

2.10. Other data collection tools - broad components to be briefly described

2.11. Study implementation/ Plan for data collection – a brief account including pre testing

2.12. Data analysis – A brief account of data processing, software and statistical methods (descriptive and inferential statistics) applicable to each specific objective.

2.13. Administrative requirements

2.14. Ethical issues and clearance

2.15. Definitions of variables specific to the study (excluding socio demographic variables) defined in operational terms.

CHAPTER 3: RESULTS

Reports the important results / main and compares results obtained with the previous project consisting the analysis and data presentation. Statement of results: the results are presented in a format that is accessible to the reader (e.g. in a graph, table, diagram or written text). Explanatory text: all graphs, tables, diagrams and figures should be accompanied by text that guide the reader's attention to significant results. Same data should not be represented in two different ways for example, using a table and a graph to represent the same data.

CHAPTER 4: DISCUSSION

This section prepares the context for interpreting the results of the project, focus on the main, effects / implications and level/limitations findings. This also explains the student's results and research opinions for the future; speculation and new theories also can be discussed. References to previous research: comparison of the results with those reported in the literature, or use of

literature to support a claim, hypothesis or deduction. Hypothesis: a more general claim or possible conclusion arising from the results. It should be concise and contain clear explanation.

CHAPTER 5: CONCLUSION AND RECOMMENDATION

Draw the major conclusions of the research project with future recommendations.

8. REFERENCES

Should use the Harvard System given below. In citation Author/Year format should be used.

9. APPENDIXES

This is an optional part depending on the content of a project. It includes additional material, additional illustration, and raw data and lengthy quotation for main content, questionnaires and etc.

C. Formatting instructions

The thesis should be word-processed and printed on both sides of A4-size paper.

Margins - 1 inch / 2.5 cm on all four sides

Font Style – Times New Roman

Font Size – 12

Line Spacing -1.15

Number of Copies – Two

Binding – Initial submission should be spiral bound and final submission should be hard bound with a blue cover and gold colour letters. The report should be submitted one (1) week before the presentation date which will be notified later. Two copies to be submitted to the Academic Department (initial and final submission). Students will be penalized for delay in submitting reports.

Page numbers – Should appear on the bottom right corner (only the page number). Until table of titles the numbering should be roman and after the title page it should be separate numbering in Arabic form.

- Except page numbers nothing should be appearing in the header and the footer.

Note: DO NOT INCLUDE ASSIGNMENT COVER SHEET

D. Date of Submission

The date of submission shall be as specified by the Academic Department, MSU.

E. Specimen Pages

Boxes given in the specimen pages represent A4 size pages of the thesis but not in the actual scale. The font to be used is specified at the right hand side margin of the pages.

a) Specimen cover page

This box is the page margin, this is not a page border, and this should not be appearing in your thesis

**THE PREVALENCE OF GI PARASITES IN HUMAN IN A
SOCIO-ECONOMICALLY CHALLENGED TEA ESTATE
COMMUNITY, GALLE DISTRICT, SRI LANKA**

Times new roman 14 BOLD ALL CAPS

Margins for the page should be 1
inch all four sides

RUVINI PERERA

A PROJECT REPORT PRESENTED BY
RUVINI PERERA

To the board of study in Biomedical Science of the
MANAGEMENT AND SCIENCE UNIVERSITY

*In partial fulfillment of the requirement
For the award of the degree of*

BACHELOR IN BIOMEDICAL SCIENCE

of the

MANAGEMENT AND SCIENCE

**University Drive, Off Persiaran Olahraga, 40100 Shah Alam, Selangor,
MALAYSIA**

2017

Specimen Declaration Page

To be included only in the FINAL HARD bound copy.

DECLARATION

(Times New Roman, size 14)

I do hereby declare that the work reported in this project report/thesis was exclusively carried out by me under the supervision of It describes the results of my own independent research except where due reference has been made in the text. No part of this project report/thesis has been submitted earlier or concurrently for the same or any other degree.

(Times New Roman, size 12)

Supplementary Formatting Guidelines

The entire report should have 1.15 line spacing except the abstract, table titles, figure captions, list of figures, and table of contents and abbreviations, which should have single line spacing.

- Use the following guidelines for the abstract page.

Title - Upper case, bold type, centered, font size 14

Keep two line spacing.

Name - Initials followed by last name, bold type, centered, font
Size 12

Keep one line spacing.

Affiliation - Affiliation should run on a single line (centred) in font size 10. The MSU affiliation must be included. The place where the research was carried may also be included as the second affiliation. There should be no line spacing between the two affiliations.

Keep two line spacing before the first paragraph.

First paragraph- Justify both left and right, font size 12.

- Each chapter shall be named in upper case bold type letters with Roman numerals (e.g.: CHAPTER 2) followed by the name of the chapter in upper case bold type with one line spacing. Both the chapter number and the name of the chapter should be centered. The text should start after two line spacing.

Specimen ABSTARCT

INVESTIGATION OF THE VALIDITY ADSORPTION ISOTHERMS OF METHYLENE BLUE DYE

A.B.C.D. Matthews

Postgraduate Institute of Science, University of Peradeniya, Peradeniya, Sri Lanka
Department of Physics, University of Peradeniya, Peradeniya, Sri Lanka

Peat, available in Brunei Darussalam, has a negative surface charge, and is highly acidic. Peat of two sites (Keramut and Damit) have about 50% C and 2.1% N, while mixed peat-clay-sand samples of the third site (Labi) show 13% C and 1.3% N. Thermogravimetric experiments result in significant mass reductions in two temperature regions: up to 100 °C and from 50 °C to 500 °C for loss of moisture and combustion of organic compounds, respectively.

Batch experiments indicate that adsorption of methylene blue (MB) on peat fits the Langmuir adsorption model with a high regression coefficient leading to an average adsorption capacity ($q_{\max}$) of 111 mg g⁻¹. Standard Gibbs free energy of adsorption of MB on peat is negative at all temperatures investigated with increase in the magnitude when the temperature is increased, while the average standard enthalpy change is positive. These results indicate the spontaneous and endothermic behavior of adsorption of MB on peat. Dynamic experiments demonstrate a remarkable adsorption ability of MB when sufficient time is allowed for interaction of adsorbate and adsorbent.

Specimen CHAPETRS/ REST OF THE DOCUMENT

CHAPTER 1

INTRODUCTION

1.1 Introduction to Adsorption Isotherms

Adhesion of atoms, ions or molecules of gas, liquid or dissolved solids to a surface is called adsorption. Adsorption is different from absorption. In absorption, the molecules of a substance are uniformly distributed in the bulk of the other, whereas in adsorption molecules of one substance are present in higher concentration at the surface of the other substance.

Two substances are involved in an adsorption process. One is the solid or the liquid on which adsorption occurs and it is called the adsorbent. The second is the adsorbate, which is the gas or liquid or the solute from a solution which gets adsorbed on the surface. Therefore, film of the adsorbate, the molecules or atoms being accumulated on the surface of the adsorbent, is created during adsorption.

1.1.1 Langmuir adsorption isotherm

The Langmuir adsorption model is the most common model used to quantify the amount of adsorbate adsorbed on an adsorbent as a function of partial pressure (p) or concentration (C) at a given temperature, T . It considers adsorption of an ideal gas onto an idealized surface. The gas is presumed to bind at a series of distinct sites on
